Util
<pre>- messages: List<Message> - tree: MessageTreeNode + dateToMilliseconds(int year, int month, int day): long + padId(long id): String + getId(String id): long + getDateTime(long id): String + loadMessages(): void + getMessages(): List<Message> + getMessage(String id): Message + saveMessage(Message message): Message + buildTree(): void + getTree(): MessageTreeNode</pre>
MessageTreeNode
<pre>- message: Message - children: ArrayList<MessageTreeNode> + MessageTreeNode(Message message) + findMessageBFS(long id): MessageTreeNode + findMessageDFS(long id): MessageTreeNode + findMessageRecursive(long id, MessageTreeNode curMessage): MessageTreeNode + addNode(Message otherMessage): void - addChild(MessageTreeNode child): void + getMessage(): Message + getChildren(): ArrayList<MessageTreeNode></pre>
Message
<pre># id: long # parent: long # title: String # content: String + Message(long id, long parent, String title, String content) + Message() + getMessage(): Message + getId(): long + setId(long id): void + getTitle(): String + setTitle(String title): void + getContent(): String + setContent(String content): void + toCsv(String delimiter): String + getDate(): String + getParent(): long + setParent(long parent): void</pre>

Test Number	Nature of Test	Method of testing and expected results
Test 1	Messages can be posted back	When the user submits the message, it appears within the database
Test 2	The Tree can be built	The method for building the tree runs without error
Test 3	The Tree is searchable	Searching for an ID returns the child. Searching for an ID that does not exist returns null
Test 4	Messages can be displayed	Items in the CSV can be seen on the HTML
Test 5	HTML is navigable	Every aspect of the website can be visited solely by visiting hyperlinks
